Introduction

What is LibLog?

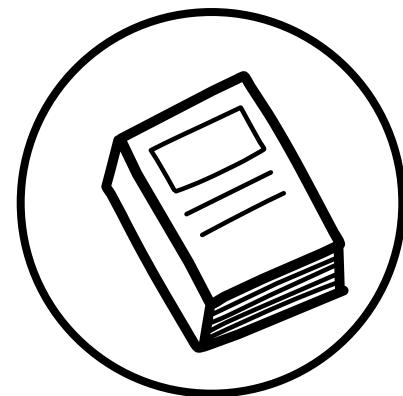

LibLog is a Command-Line Interface (CLI) application designed for managing your personal library.

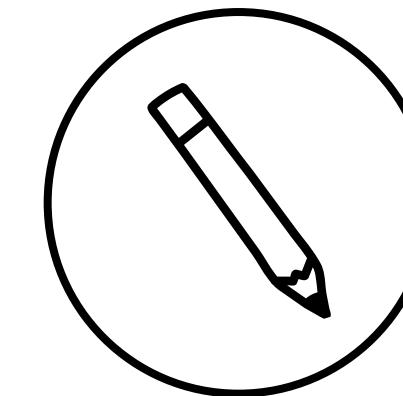

Features

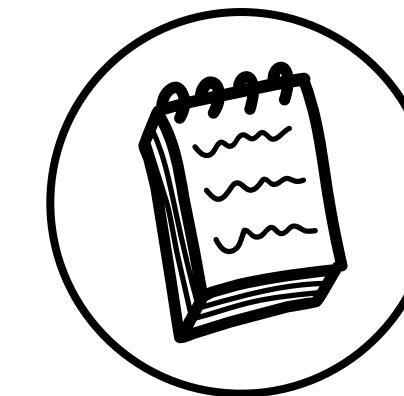

Manage Books: Add new books to your reading list, along with details like author, genre, and total pages.

Create a Reading Goal: Set goals for how many books you'd like to read within a specific timeframe.

Review Books: Rate the books you've read and leave reviews.

Reading Suggestions: Get suggestions on what to read next.

Export Reading List: Share your reading list externally, saving it to a csv file.

Benefits

Ease

LibLog helps you pick what
to read next

Organization

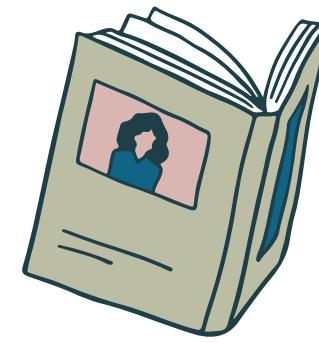

No more scattered book lists.
With LibLog, everything is in
one place.

Sharing

Tell your friends about your
favorite books by sharing
your list easily.

In Conclusion...

LibLog is all about making reading more enjoyable. It's like having a smart bookshelf that keeps your books and reviews organized, gives you cool suggestions and lets you share your reads with friends.
